

Graduate Stories: J

Data Analytics Graduate

Now: Associate Power Apps Developer, Bespoke XYZ

J is a Data Analytics graduate. He took part in the bootcamp in Manchester and graduated in August 2022. Before taking part in the bootcamp, J had an interest in a career in tech but was struggling to get the right qualifications to break into the field.

"[It was difficult] obtaining the necessary qualifications without a degree... and Generation stood out because it offered the opportunity to get hands-on experience in a relatively short space of time.

Learning Power BI and focusing on descriptive and diagnostic analytics was something I was really looking forward to. In terms of topics, the most challenging element was using SQL.

I enjoyed the tutoring [and] thought the course was well balanced, and the support on offer was brilliant. [I] also found my cohort to be a great mix of characters.

Every one of the staff members, tutors, support, whatever their role, were great people."

When asked to describe the bootcamp in one word, J said:

"Rewarding."

"If you are prepared to put the effort in, you will be rewarded. I have already encouraged a friend to join Generation. If [you] can get on the course, do [it], as it can be very rewarding. **There are no limitations in what I can achieve over the next few years... and that excites me.**"

Since graduating, J secured a role as an Associate Power Apps Developer at Bespoke-xyz.
